

MONSOON®

Product Overview

MONSOON® fungicide provides broad spectrum disease control available to help maximize yield and profit potential in wheat and barley, controlling both scab and leaf disease.

Product Features

- Preventative scab activity
- Reduce DON (vomitoxin) levels
- Leaf disease control

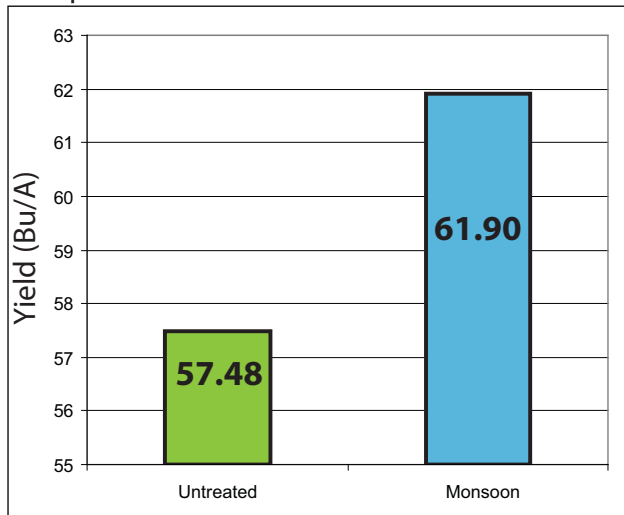

Recommended Adjuvant:

Active Ingredients: Tebuconazole 38.7%

Application Rate: 4 oz/A

Replicated Wheat Field Trials from 2001-2007

In 98 side-by-side wheat trials, (spring, winter and durum), a single application of tebuconazole at Feeke's 10.51 (15% flower), provided an average yield increase of 4.42 bu/A.

Application Timings for Fusarium head blight in Wheat:
