

Fungicide

Polyram® 80 DF

Product Overview

POLYRAM® 80 DF is a non-systemic contact fungicide that belongs to the chemical group (EBDC). The active ingredient in **POLYRAM® 80 DF** is metiram, which is effective against Late Blight and Early Blight in potato. **POLYRAM® 80 DF** is being constantly improved with the latest milestone being a dry flowable (DF) formulation.

Benefits

Smallest particle size

Disperses quickly – usually in about 5 seconds

Stays in suspension better in your spray tank

Spreads more evenly across plant surfaces, with better adhesion and superior rainfastness

Highest Zinc Content

Contains 14.0% zinc expressed as metallic

With 14.0% zinc, **POLYRAM 80 DF** has significantly more zinc than any other blight fungicide

With multiple applications, the amount of zinc you make available to the plant through **POLYRAM 80 DF** mean you avoid adding a costly micronutrient application to your fertilizer program.

Extremely Versatile

Can be tank mixed with other products such as; Matrix®, Super Tin®, Curzate®, Previcur Flex®, Reglone® and foliar feeds (*Note: **Super Tin*** cannot be tank mixed with foliar feed type products*)

Easy to handle, is packaged in 30/lbs. paper bags and produces less foam in the spray tank

Mixes faster and stays in suspension longer than many other protectant fungicides on the market today

Can be air or ground applied

Cost Effective

Contains 6.25% more active ingredient than other EBDC's in the market.

Recommended Adjuvant:

Super Tin is a restricted use pesticide.
