Soil Surfactant

“Fast and Firm Conditions, The Players Product”

Strategy of Use: Preventative Short-Term (PST)

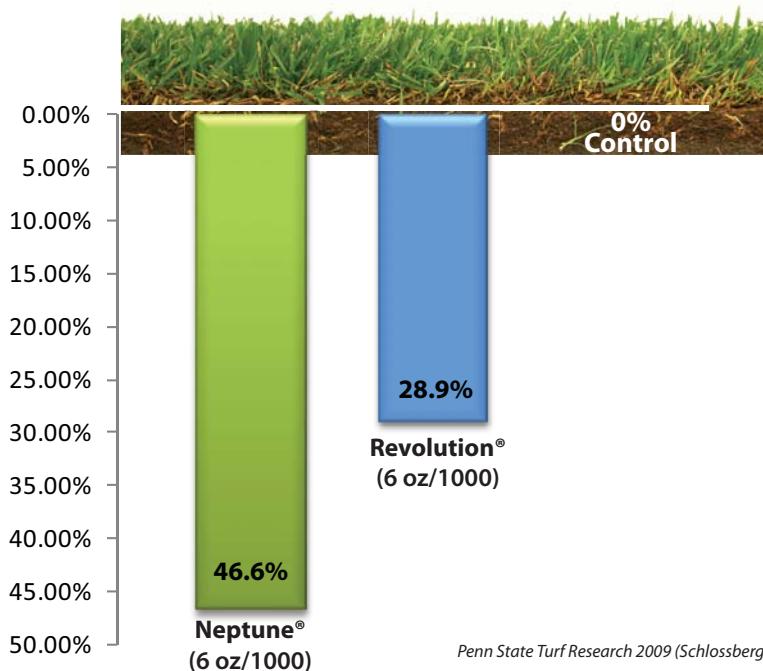

- 30 day PST program for Water Repellency and Localized Dry Spots (LDS)
- Provides 5 to 7 Days of Dew Suppression
- Safe to use – No Burn

Laminar Flow Technology

Balanced ratios of “stacked” surfactants that are specifically designed for each individual product to provide attachment of moisture to soil particles and insure penetration through the soil profile. **LFT** significantly enhances the products PERFORMANCE, offering the most advanced technology in soil surfactants.

Comparison of Infiltration and Penetration Rates

Research Facts and Findings:

Approximately 91% of superintendents use wetting agents to either enhance water irrigation efficiency or manage localized dry spot (Karnok & Tucker, 2009).

“I can only think of one soil property common to water irrigation efficiency or localized dry spots; it is water penetration / infiltration.” — Schlossberg

Golf Course name: _____

Where on the golf course are Water Repellency and Localized Dry Spots problematic? _____

What Strategy do you want to employ to manage those Conditions? (circle all that apply)

Strategies of Use:

Preventative Short Term (PST)

Product Choices: MiZer®, Revert, Neptune®

Preventative Long Term (PLT)

Product Choice: LT120

Treatment

Product Choices: Respond® 3, Revert (for soil reclamation)

Soil Surfactant Strategy:

What areas on the course will products be applied?

Greens _____

Tees _____

Fairways _____

Roughs _____

Product Recommendation:

Timing of Application: _____

Rates: _____

Cost of the Program Recommended: _____

Recommendation Made By: _____
