Foliar Applied

CALBIT

Product Overview

CALBIT® (4-0-0, 8% Ca, 0.4% B) is a patented foliar calcium chelated with LPCA (ligninpolycarboxylic acid) for remediation of calcium deficiencies of calcium in the fruit and leaf.

Product Features

- Chelated with LPCA to increase Ca availability
- Contains nitrate nitrogen and boron for increased uptake and translocation
- Ionic properties of LPCA reduce surface tension, increasing wettability, leaf penetration, and overall plant uptake

Product Benefits

- Increased mobility and translocation of calcium within the plant
- Increased reproductive organ sizing and density
- Low phytotoxicity

Application Information

- Apply 1-2 pints/acre every 14-21 days as needed
