NUTRISYNC M (0-0-2) is a unique foliar technology specifically designed to enhance plant physiological activities and growth of various crops. NUTRISYNC technology increases **assimilation**, **mobilization** and **utilization** of nutrients inside the plant. These features create healthier plants throughout the growing season which can lead to higher yields and a better return on investment for the grower.

NutriSync M

Product Benefits:

- Formulated for monocots
- Ultra low use rate
- Readily plant available forms of boron, manganese and zinc
- Designed to be used with glyphosate
- Excellent crop tolerance
