Dyna-Shield Flowtection® provides commercial treaters with state of the art technology for enhancing the appearance of seed while improving seed flow and controlling dust off during and after the seed treating process. Labeled for crops including cereals, corn, legume vegetables and soybeans.

Product Benefits:

- Enhances seed appearance
- Improves seed flowability in treating and planting equipment
- Controls dust-off
- Reduces seed treatment buildup
- Meets the 40 CFR requirements for seed treatment applications and is adaptable to most makes of seed coating and treating equipment—both batch and continuous systems
