

# NutriSync® Calcium 4.5

**NUTRISYNC® CALCIUM 4.5** (0-0-0 4.5% Ca Acetate) is a next-generation liquid foliar nutrient designed for crops that depend on calcium to drive plant and fruit quality. Powered by proprietary Nutrient Transport Technology and Acetate Technology, NUTRISYNC CALCIUM 4.5 efficiently moves calcium and other immobile nutrients throughout the plant, maximizing physiological activity and supporting cell development for improved yield potential.

## FEATURES

- Powered by proprietary NUTRISYNC Nutrient Transport Technology and Acetate Technology for enhanced micronutrient uptake and mobility.
- Optimized nitrogen to calcium ratio (4.5% Ca Acetate) for safe and flexible foliar applications and easy tank-mixing.
- Delivers plant-available calcium when crops need it most with a wide application window across growth stages.

## GROWER BENEFITS

- Maximizes plant uptake and utilization of applied and existing nutrients to areas of high demand during critical stages, supporting consistent crop and fruit growth and development.
- Promotes strong cell structure, integrity, and key enzyme function, protecting crop quality and yield potential under high-demand or stressful conditions.
- Non-phytotoxic formulation that can address in-season calcium needs for most crops, including nitrogen-sensitive crops, reducing the risk of calcium deficiency.

## ANALYSIS

4.5% Ca Acetate

## RATES

Row crops: 1-4 qt/A; Specialty crops: 1-16 pt/A
