CHOICE WEATHER MASTER is a water conditioning agent for use with agricultural chemicals. Designed for hard water conditions, this liquid formulation locks up hard water cations allowing maximum herbicide performance. Compatible with all formulations of glyphosate.

Product Benefits:

- Reduces the effects of hard water on herbicide performance. When certain herbicide chemistries are added to water the negative charges in the herbicide molecules attract the positive ions (cations) in the water. The herbicide and these cations form a strong complex which can prevent or hinder uptake of the herbicide into the plant, effectively reducing herbicide performance.
- Multiple sequestering and complexing agents bind multiple hard water cations, such as calcium, manganese, magnesium and potassium.
- Liquid formulations provides convenience of treating 1000 gallons with 2.5 to 5 gallons of liquid instead of 100 to 200 pounds of dry product.
- **ALWAYS** add CHOICE WEATHER MASTER to the spray tank **BEFORE** adding pesticides.
