C² Powered Micronutrients

ReaX Boron 10% is formulated to safely and efficiently deliver Boron in all types of soil applications, and to keep it available to your crop longer than any other source. It also provides additional soil benefits with our C² technology. We use pressure and heat to react and complex Boron with organic acids, so that it remains available to your crop longer and in a wider range of soil conditions. Along with Boron and organic acids, the addition of a carbohydrate package helps feed native microflora for additional nutrient availability.

Why Boron?

Boron is an essential micronutrient for every crop and can be one of the most difficult deficiencies to contend with. It is highly mobile in the soil, thus prone to leaching, but it can be tied up with various organic components which prevents uptake. Ironically Boron is highly immobile once it enters the plant. Boron truly is a tricky nutrient to manage. Making ReaX Boron the easy button of Boron management.

Grower Benefits:

- Provides 10% Boron to aid in reproduction, respiration, and nutrient transport
- Supports soil microbiota for healthier, more biologically active soil
- C² Technology stabilizes nutrients prone to movement in the soil for reliable, available nutrition
- Enhances buffering capacity to moderate accumulated salt effects in the application zone

What is C² Technology?

C² is a proprietary technology consisting of extracted Carbon and Carbohydrate reacted with nutrients for improved Soil Health and Plant Performance.

Carbon: Increases nutrient availability by fostering growth of beneficial soil microbes and positively impacting soil attributes creating better holding capacity for nutrients and water

Carbohydrate: Improves nutrient uptake and availability in both soil and foliar applications
